

OMNIS

Discover workforce diversity representation

PSR recognise the importance of data when assessing the diversity of the workforce and creating inclusive and accessible processes. In October 2023 we deployed AMS proprietary technology, OMNIS, across the framework to provide our customers with further insight into the makeup of their workforce to inform strategic decision making.

Since launch, the OMNIS platform has provided customers with their individual contractor workforce and Recruit, Train, Deploy cohort diversity data. The dashboards are refreshed monthly providing customers with a live data feed.

In 2024, we will be releasing the first OMNIS Benchmarking Report which will compare framework level data against Civil Service permanent employee data and the general population to provide further insight to support strategic decisions and targets.
