

Thrive

Social Value Measurement & Reporting

Thrive software uses the Impact Evaluation Standard (IES) methodology and metrics to covert social value activity into indicative financial proxy values. The IES methodology is directly aligned to the objectives and reporting metrics that are outlined in the UK Social Value Model.

How does it work?

- › PSR initiatives mapped over to IES metrics
- › Data collectors identified across the business
- › Monthly data uploads using existing tracking methodologies
- › Metric claims evidenced in the platform using IES evidence guidance
- › Evidence audit conducted by the **social value team** prior to approval of a claim
- › Once approved, values converted into indicative financial proxy values in line with IES methodology
- › Quarterly framework reports will be shared with CCS and customers.

For more details, contact: PSRSocialValueTeam@WeAreAMS.com

£57.5M Social Value generated in the 23-24 Financial Year

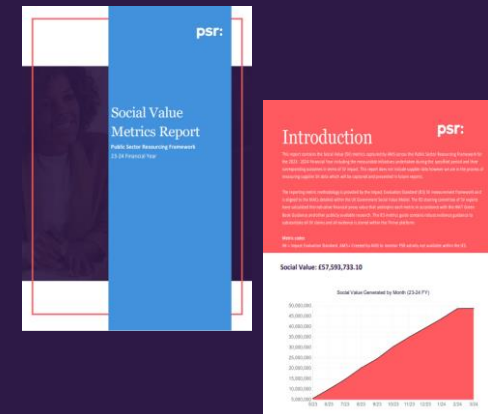

Our highest value metrics include:

£57.1M
Generated from SME Supplier Spend

£93.3K
